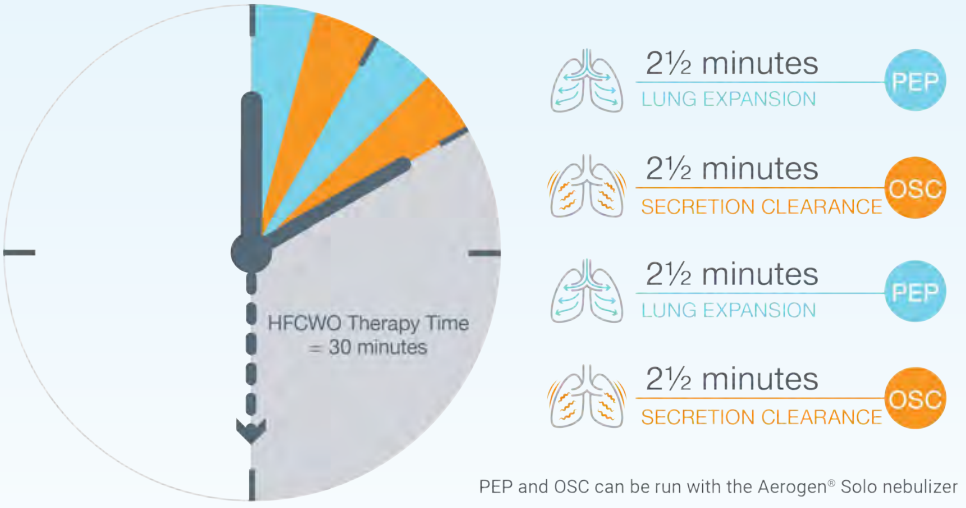
BiWaze® Clear SYSTEM

for Home Care

How does BiWaze Clear work?

BiWaze® Clear System provides oscillating lung expansion (OLE) therapy to help treat and prevent atelectasis, remove retained secretions from deep in the lungs and reduce work of breathing. BiWaze Clear expands and clears the airways through a combination of airway clearance therapies in just 10 minutes. Alternating therapies of lung expansion and high frequency oscillation combined with nebulization helps calm inflamed airways and thin mucus.

BiWaze® Clear Therapy = 10 minutes*



PEP and OSC can be run with the Aerogen® Solo nebulizer

*Therapy time may differ depending on the patient's prescription

Differentiators

- Closed circuit design with Aerogen® Solo nebulizer
- Dual air-path control to separate inhaled and exhaled air
- Stored therapy profiles (up to 10)
- Advanced therapy programming to customize each therapy phase
- Touchscreen control
- Built in lithium-ion battery included

HCPCS Codes

E1399 = OLE Therapy system delivering positive expiatory pressure (PEP), high frequency oscillations, and neutralizer therapy

E1399 = Breathing interface for OLE therapy system (monthly)

Target Patient Population and Environment

BiWaze Clear can be used throughout the continuum of care, hospital to home for pediatric and adult patients

Patient Conditions

- Bronchiectasis
- COPD
- Cystic Fibrosis
- Amyotrophic lateral sclerosis
- Muscular dystrophy
- Spinal muscular atrophy
- Multiple sclerosis
- Spinal cord injury
- Quadriplegia

Patient Symptoms

- Diminished lung ventilation:
- Shallow breathing/hypoventilation
- Inadequate airflows
- Mucus plugging
- Poor or absent cough
- Pain associated with chest wall injury or incisions
- Impaired muscle function
- Impaired diaphragm
- General fatigue
