abm RESPIRATORY CARE Newsletter

May 2026

This Month's Highlights

- **Upcoming June Webinars -** https://abmrc.com/medical-education/
  - **Free CRCE Program:** Bronchiectasis
  - **Educational Overview of E0469**
- **Education Spotlight:** Free CME Education on Airway Clearance
- **Tip of the Month:** Strengthen documentation before claim submission
- **Did You Know?:** Exported BiWaze® data logs can be decrypted online

May Education Spotlight

Free CME Education on Airway Clearance

Continuing education is an important part of helping clinicians stay current on airway clearance therapies and the evolving needs of patients with retained secretions.

This month, we are highlighting our free CME education program focused on airway clearance and oscillating lung expansion therapy. This educational activity is designed to help clinicians better understand therapy mechanisms, patient considerations, and the role of airway clearance in supporting respiratory care.

Tip of the Month

Before you submit: Review the Reimbursement Resources

Strong claim preparation starts before the claim is submitted. When evaluating a patient for BiWaze Clear therapy, it is helpful to document the patient's qualifying condition, clinical need, current therapy challenges, and why BiWaze Clear may be appropriate based on the patient's individual medical condition.

ABM Respiratory Care's reimbursement resources are designed to help providers organize key information and support a more complete claim submission process. The reimbursement page includes tools to help teams get started, and additional education and supplemental resources are available through our reimbursement concierge.

Did You Know?

Exported BiWaze Data Logs can be decrypted online

BiWaze® Clear and BiWaze® Cough systems allow users to export encrypted therapy data logs. To review the information, users can visit the online Arc Connect decryption tool, upload the exported file, and select the desired date range.
Once the file is uploaded, the tool can generate:

- A detailed spreadsheet for therapy data analysis
- A PDF summary of therapy performed

This makes it easier for clinicians and care teams to review therapy history and support patient follow-up.
