BiWaze® Clear SYSTEM

For Patients and Caregivers

A 10-minute airway clearance treatment

Let's break the cycle

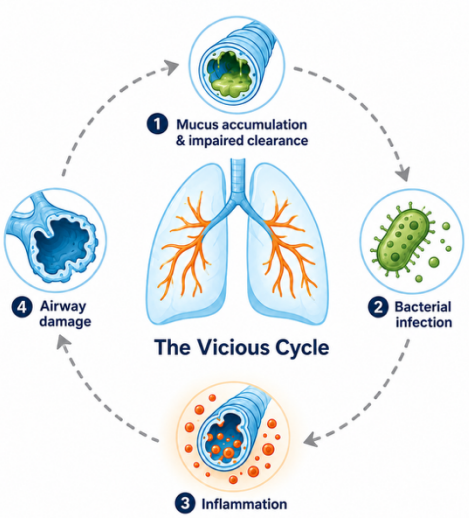

If you are living with bronchiectasis, understanding what is happening inside your lungs can help explain why clearing mucus is so important.

Bronchiectasis can create a cycle.

Bronchiectasis causes the airways to become widened and damaged. Mucus can collect in these widened areas, where a cough cannot always reach it. When mucus becomes trapped, germs can grow more easily. This may lead to infection and inflammation, causing more airway damage and even more mucus collection. The cycle continues.

The cycle can be interrupted.

It starts with mobilizing and clearing the mucus.

How BiWaze Clear Works

Think of a clogged pipe

OPEN

The pipe

Gentle pressure holds your airways open, creating a path for secretions to move.

SHAKE

It loose

Rapid little pulses vibrate the mucus until it lets go of your airway walls.

THIN

It out

Aerosol helps thin and loosen mucus so it can more easily move.*

What a therapy session looks like

1. Sit somewhere comfortably.
2. Breath through the mouthpiece.
3. In 10 minutes, the therapy is complete.**

No vest, No pounding on your back or chest.
No lying in awkward positions.

Questions for your care team

- Is my current airway clearance routine adequately managing my mucus burden?
- Could BiWaze Clear be appropriate for my condition?
- How would it fit into or replace parts of my current treatment routine?
